**The Dark Side of Cycling**

The illegal drug use that has plagued the world of professional cycling for decades must be stopped. Certain drugs help cyclists ride faster and farther than normal. Some of the drugs work by increasing the number of red blood cells in the body. While the drugs might help the athletes to perform better, there can be terrible side effects. For example, in the year and a half before the 2004 Tour de France, nine professional cyclists died from overdoses of illegal drugs. Several professional baseball players in the United States have also been involved in a similar drug controversy. Despite the danger, more and more cyclists are turning to these drugs to gain an advantage over their competition. It is unfortunate that these athletes value their sports careers more than their lives.
